**PH CAGE™ – PREVENT HEAD COLLAPSE**

**BONE DENSITY AUGMENTATION**
- 3-Dimensional support distributes load over large surface area
- Provides subchondral buttress for articular support
- Augments areas of low bone mineral density

**MANAGE TUBEROSITY & CUFF FORCES**
- Tuberosity specific re-aproximation
- Suture washers provide additional compression for tuberosities and tie down

**POLYAXIAL SCREW PLACEMENT & LOCKING CAPABILITY**
- Screw/Cage interface provides locking capabilities
- Screws can be placed in any orientation necessary
- Polyaxial screw placement accommodates fragment specific fixation and repair

**MEDIAL COLUMN SUPPORT**
- Sub-Chondral buttress limits head collapse and thus limits collapsing forces across calcar and medial cortical area
- Torsional stability and medial support provided by construct

**MAINTAIN REDUCTION**
- 3-Dimensional support prevents collapse and loss of reduction during the healing phase
